TYMLY
Your Helpful Event Coordination Tool

Product Overview, Current Capabilities & Future Vision

---

1. What Is Tymly?

Tymly is an event coordination tool designed to help the people behind live events coordinate what is happening, when it is happening, and how the event progresses.

It began with a simple but important problem in live events: keeping different parts of an event coordinated while the event is actually happening.

The first practical application was in church services, where a media team needed a reliable way to manage the timing of sermons and other parts of a service while allowing the speaker to see the remaining time.

That initial use case revealed a larger opportunity.

Events are made up of people, activities, schedules, transitions, and time constraints. Keeping all of those elements aligned is an event coordination problem, not merely a timing problem.

That is the category Tymly belongs to.

Tymly is an event coordination tool.

Its purpose is to help the people responsible for an event stay coordinated while the event is taking place.

---

2. The Problem Tymly Solves

Live events involve many moving parts.

A typical event may involve:

- Organizers
- Speakers
- Presenters
- Moderators
- Media teams

- Technical teams
- Volunteers
- Performers
- Multiple sessions
- Fixed schedules
- Time allocations
- Transitions

The event may have a programme or schedule, but once the event begins, someone still has to make everything happen according to that plan.

That creates questions such as:

- What is happening right now?
- How long should this segment last?
- How much time is remaining?
- What happens next?
- Who is responsible for the next part?
- Is the event running on schedule?

In many environments, these questions are handled through a combination of:

- Paper schedules
- WhatsApp messages
- Phone timers
- Verbal instructions
- Hand signals
- Spreadsheets
- Separate software tools

Tymly is designed to make that coordination more deliberate and easier to manage.

---

3. What Tymly Does Today

This section describes existing/current Tymly functionality only.

It should not be interpreted as a list of planned or hypothetical features.

3.1 Event Timing

Tymly currently provides a dedicated countdown experience for live events.

An operator can set a duration and run a countdown while an event segment is taking place.

The original use case included common durations such as:

- 30 minutes
- 45 minutes
- 60 minutes
- 90 minutes

The purpose is to give the people involved in the event a clear, shared reference for the amount of time allocated to a segment.

3.2 Preset Time Selection

Tymly supports selecting predefined durations rather than requiring the operator to manually construct every countdown.

This makes it practical for recurring event formats where particular time allocations are used repeatedly.

3.3 Large, Visible Countdown Display

The countdown is designed to be clearly visible in an event environment.

This allows the remaining time to become part of the event workflow rather than remaining hidden on an individual's phone or computer.

The display can therefore serve as a communication mechanism between the event team and the person currently conducting the session.

3.4 Desktop-Based Operation

The original Tymly implementation is a desktop application designed for use by an event/media operator.

This reflects the original environment in which Tymly was developed: a media or technical desk controlling what is shown during a live event.

3.5 Simple Operator Workflow

The current experience is intentionally straightforward:

Select the duration → Start the timer → Monitor the countdown.

The goal is to avoid unnecessary complexity for the person operating Tymly during a live event.

---

4. What Tymly Is Used For Today

Although Tymly is intended to serve a broad event market, its original and clearest current use case is live programme timing and coordination.

Examples include:

Church services

A media team can use Tymly to time sermons, teachings, announcements, or other segments of a service.

Presentations

A presenter can see how much time remains in an allocated presentation slot.

Seminars

Organizers can use a visible countdown to help speakers stay within their assigned sessions.

Conferences

A conference team can use the countdown to help manage individual speaker slots.

Workshops

Facilitators can use timing to keep sessions moving according to the programme.

Student events

Organizers can use Tymly for debates, presentations, seminars, competitions, and similar timed activities.

These are current use cases, not claims that Tymly already provides a complete event-management system for each category.

---

5. What Tymly Is NOT Yet

This distinction is important.

Tymly should not currently be presented as though it already provides:

- Full event scheduling
- Attendee management
- Ticketing
- Registration
- Team collaboration
- Automated notifications
- Multi-user coordination
- Speaker dashboards
- Advanced event analytics
- Automated transitions
- Integrations with other event platforms
- Remote participant control
- Full event-production management

These may represent opportunities for future development, but they should not be described as existing Tymly capabilities unless they are actually implemented.

---

6. Who Is Tymly For?

The broader Tymly audience consists of people who organize, coordinate, produce, or participate in live events.

Primary audience

Event organizers

People responsible for making sure an event follows its programme.

Media and technical teams

Teams responsible for the operational and technical side of an event.

Speakers and presenters

People who need to work within defined time allocations.

Churches

One of Tymly's original and most obvious use cases.

Conference and seminar teams

Organizations running events with multiple speakers and timed sessions.

Educational and student organizations

Groups running presentations, debates, workshops, competitions, and similar programmes.

Corporate event teams

Teams coordinating meetings, presentations, training sessions, conferences, and other live programmes.

---

7. Why Tymly Is an Event Coordination Tool

A timer by itself solves one problem:

«How much time is left?»

Tymly's broader purpose is:

«How do we help the people involved in an event stay coordinated?»

The current product begins addressing that through timing.

The timing system gives the event team a shared reference point and helps coordinate the relationship between:

The event → The operator → The speaker → The allocated time

That is why the product should be understood as the beginning of an event coordination system, rather than simply another timer.

---

8. What Sets Tymly Apart?

Tymly exists in a space where many products already provide some form of event timing or coordination.

That includes:

- Presentation software
- Church software
- Dedicated stage timers
- Event-management platforms
- Scheduling software
- General productivity tools

Tymly should therefore not claim to be the only product that can time an event.

Its differentiation comes from its focus and intended direction.

Tymly is being built around the operational reality of live events.

The question is not simply:

“Can we display a countdown?"

The question is:

"Can we make it easier for the people behind an event to stay coordinated?"

---

9. Tymly Compared With Other Solutions

Simple timer apps

A phone or desktop timer can count down.

But it is generally designed as an individual utility.

Tymly is designed specifically around the context of an event.

Countdown videos

Countdown videos are useful for displaying a predetermined countdown.

However, they are essentially media assets rather than an interactive event-coordination system.

Tymly allows the operator to control the timing dynamically.

Presentation software

Presentation platforms can include timers alongside presentations, media, slides, and other production functions.

Their primary purpose, however, is presentation and media production.

Tymly's core purpose is event coordination.

Full event-management platforms

Event-management platforms often focus on registration, ticketing, attendees, marketing, logistics, or planning.

Tymly's focus is closer to the live execution of the event.

It is concerned with what happens when the event is actually underway.

---

10. The Tymly Philosophy

Tymly is built around several principles.

Keep coordination simple.

The tool should reduce complexity rather than introduce more of it.

Make important information visible.

People should not have to constantly ask what is happening or how much time remains.

Support the people running the event.

Tymly is designed for the organizers, operators, speakers, volunteers, and technical teams who make live events work.

Work with the reality of live events.

Events are dynamic. Things can change, run late, or happen differently from the original plan.

Stay useful without becoming distracting.

Tymly should assist the event rather than become another source of operational friction.

---

11. FUTURE VISION

Where Tymly Is Going

The following section describes the direction Tymly could develop toward.

These are future possibilities and product vision, not current features.

The long-term vision is for Tymly to become a broader event coordination platform.

Instead of simply helping an operator run a countdown, Tymly could eventually help coordinate the entire flow of an event.

---

12. Potential Future Capabilities

Event Programme Management

Tymly could allow organizers to build an event programme containing:

- Sessions
- Speakers
- Activities
- Durations
- Start times
- Transitions

- Breaks

The event programme could become the foundation for the live coordination experience.

Real-Time Event Status

Tymly could provide a live view of:

- What is happening now
- What has already happened
- What is coming next
- Whether the event is ahead or behind schedule

This would move Tymly from simply displaying time to helping the team understand the state of the event.

Role-Based Views

Different people could potentially see different information.

For example:

Organizer: overall event status

Speaker: current session and remaining time

Technical team: current and upcoming programme items

Moderator: session and transition information

This would make Tymly a shared coordination system rather than a single-screen tool.

Speaker & Participant Coordination

Future versions could potentially allow speakers and participants to receive relevant information about:

- Their session

- Their scheduled time
- Their position in the programme
- Upcoming responsibilities
- Changes to the programme

The objective would be to reduce the amount of manual communication required during an event.

Notifications

Tymly could eventually notify relevant people when:

- Their session is approaching
- They are needed
- A session has started
- A session is ending
- The programme changes

Again, this is part of the future vision, not current functionality.

Live Programme Adjustments

Because live events rarely follow the original plan perfectly, a future Tymly system could allow organizers to adjust the programme while the event is happening.

For example:

A speaker runs late.

A session is cancelled.

A break is extended.

A new activity is added.

The system could then reflect those changes across the relevant views.

Multi-Screen Coordination

Future versions could potentially allow different event displays for different purposes.

For example:

- Main event display
- Speaker display
- Operator dashboard
- Backstage display
- Organizer dashboard

Each could present the information relevant to its audience.

Integrations

As Tymly develops, integrations with existing event-production and communication tools could become possible.

The purpose would be to allow Tymly to work alongside the tools event teams already use rather than forcing them to replace everything.

---

13. The Long-Term Opportunity

The long-term opportunity is to make Tymly a coordination layer for live events.

Imagine an event where:

- The organizer knows the state of the programme.
- The speaker knows their available time.
- The technical team knows what is coming next.
- The moderator knows when to transition.
- The next participant knows when they are needed.
- Everyone is working from the same live event information.

That is the larger vision.

The timer is one component.

The programme is another.

The people are another.

The communication between them is another.

Together, those pieces form event coordination.

---

14. The Tymly Story

Tymly began with a practical problem.

In a church service, the media team needed a better way to manage the timing of a speaker's session.

The obvious solution was a timer.

But the more important realization was that timing was only one part of the problem.

The larger challenge was keeping the people involved in the event coordinated.

That insight is what gives Tymly its broader direction.

It started with time.

It is becoming about coordination.

---

15. The Core Positioning

Tymly is an event coordination tool that helps the people behind live events stay aligned on what is happening, when it is happening, and what comes next.

---

16. Short Description

Tymly helps event teams coordinate the moving parts of a live event, from timing and programme flow to the people responsible for making each part happen.

---

17. Elevator Pitch

“Tymly is an event coordination tool built for the people behind live events. It started with timing, but the bigger goal is to help organizers, speakers, technical teams, and other participants stay aligned throughout an event—knowing what is happening, when it is happening, and what comes next.”

---

18. The Simplest Way to Explain Tymly

If someone asks:

"What exactly is Tymly?"

Say:

«Tymly is an event coordination tool. It helps the people behind a live event stay coordinated as the event happens. The current product focuses on live timing and countdowns, while the long-term vision is to help coordinate the wider event programme, people, communication, transitions, and real-time changes.»

That distinction should remain central to all future Tymly communication.

---

19. Brand Essence

Tymly keeps the people behind the event in sync.

Tymly — Your Helpful Chronoguide.
